REASONS FOR ALLOWANCE

1. The following is an examiner's statement of reasons for allowance: The prior art of Edlinger shows the desire for propellant gases to be at a high temperature to provide for a higher shearing force of the propellant stream, resulting in finer particles. Additionally, Edlinger demonstrates a ring chamber with an adjustable throttle cross-section. However, Edlinger does not disclose the suction of hot combustion gases through the throttle cross-section. Although the prior art of Barnard shows the well know concept of recycling hot combustion gases from an antechamber to be further used somewhere else in the process, it does not specify surrounding a propellant stream with the hot combustion gases to produce a high shearing force. Furthermore, the prior art of Walz teaches the need to heat up the propellant stream; however, it utilizes induction heating for heating the propellant stream and not hot combustion gases from the antechamber surrounding the propellant stream.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
